

User can turn the lamp on or off in three different ways:

- 1- With a motion sensor, motions will detect and the lamp will turn on automatically
- 2- After a time (e.g. 10 seconds) the lamp that turn on with motion sensor will turn off. The time can be set in user Application.
- 3- In user application, the user can set a time schedule for a lamp in a specific place at his home. For example every night at 8 p.m. the lamp of dinning room will turn on automatically.
- 4- IOT projects are for remote controlling so with an application user can turn lamp on or off only with a click in his phone.
- 5- For user application, the user have to Log in first and then he can have access to the setting.
- 6- It is available to add more lamps and sensor to the house
- 7- The user can see a history of his actions and lamps
